1 INTRODUCTION

The VIDAS Easy *Salmonella* method was validated with the certificate number BIO 12/16 - 09/05. The initial study was performed by IPL.

The following renewal and extension studies were performed.

Date	Study	Expert laboratory	Standards used
20 September 2005	Initial validation	IPL	ISO 16140 (2003) ISO 6579 (2002)
2007	Extension for: - a modification of the confirmation procedure (SX broth replaced by SX2 broth) - feed products (study realized by Institut Pasteur de Lille);	IPL	ISO 16140 (2003) ISO 6579 (2002)
2009	Renewal study	IPL	ISO 16140 (2003) ISO 6579 (2002)
2011	Extension for a new conjugate: - Sensitivy study - RLOD - Inclusivity	IPL	ISO 16140 (2003) ISO 6579 (2002)
2013	Renewal study – Complementary tests for inclusivity	ADRIA	ISO 16140 (2003) ISO 6579 (2002)
October 2014	Extension for the use of a latex test to confirm the characteristic colonies from selective agar plates	ADRIA	/
September 2015	Extension for the use of the VITEK MS, automated mass spectrometry microbial identification system to confirm characteristic colonies from ASAP or TSA plates	ADRIA	/
September 2016	Extension for the use of software version 4.8	bioMérieux	/
November 2017	Renewal and extension study for: - Cocoa and chocolates (375 g sample size) - Milk powder (375 g sample size)	ADRIA	ISO 16140-2 (2016) ISO 6579-1 (2017)
April 2018	Extension for the use of software version 4.10	bioMérieux	/
May 2020	Extension study for: - Pet food (375 g sample size)	ADRIA	ISO 16140-2 (2016) ISO 6579-1 (2017)
June 2021	Renewal study	ADRIA	ISO 16140-2 (2016) ISO 6579-1 (2017) and ISO 6579-1 /A1 (2020)

2 METHOD PROTOCOLS

2.1 Alternative method

2.1.1 Principle

VIDAS *Salmonella* (ref. 30702) is an enzyme immunoassay for use on the automated VIDAS for the detection of *Salmonella* antigens using the ELFA method (Enzyme Linked Fluorescent Assay).

Each test is composed of two parts:

- The Solid Phase Receptacle (SPR[®]) serves as the solid phase as well as the pipetting device. The interior of the SPR[®] is coated with anti-*Salmonella* antibodies adsorbed onto its surface,
- The strip which contains all the ready-to-use reagents for the assay: washing buffer, antibodies anti-*Salmonella* conjugated with alkaline phosphatase and substrate.

All of the assay steps are performed automatically by the instrument. Part of the enrichment broth is dispensed into the reagent strip. The reaction medium is cycled in and out of the SPR[®] several times.

At the end of the assay, results are automatically analyzed by the instrument. The fluorescence is measured at 450 nm and give a RFV (relative fluorescence value).

Then, the instrument calculates a test value for each sample. This value is then compared to internal references (thresholds) and each result is interpreted (positive, negative) as following:

Test value (TV) = RFV sample / RFV standard.
 if TV < 0.23, the test is negative
 and
 if TV \geq 0.23, the test is positive

2.1.2 Protocols (See Appendix 1)

- The different protocols are described in Table 1.

Table 1 - Protocols

Validation	Categories	Sample size	1st Enrichment step
Initial	Food and feed products	25 g	1/10 dilution, BPW for 16 - 22 h at 34 - 38 °C according to ISO 6887 parts
	Production environmental samples	25 mL or sampling device	1/10 dilution, BPW for 16 - 22 h at 34 - 38°C Swab: 10 mL BPW for 16 - 22 h at 34 - 38°C Sponge: 100 mL BPW for 16 - 22 h at 34 - 38°C
Extension (2017)	Cocoa and chocolates	375 g	1/10 dilution, pre-warmed UHT skimmed milk for 16 - 22 h at 34 - 38°C
	Milk powders	375 g	1/10 dilution, pre-warmed BPW for 16 - 22 h at 34 - 38°C
Extension (2020)	Pet food	375 g	1/10 dilution, pre-warmed BPW for 16 - 22 h at 34 - 38°C

- Subculture in SX2 broth (0.1 mL + 10 mL) for 22 - 28 h at 41.5°C ± 1°C;
- Heat treatment of an aliquot of SX2 broth;
- VIDAS test;
- Confirmation by streaking 10 µL of non-heated SX2 broth onto a selective agar. Typical colonies are confirmed with or without purification step by:
 - * Biochemical gallery on isolated colony;
 - * Latex test on isolated colony from ASAP, chromID or TSA;
 - * VITEK MS on isolated colony from ASAP and TSA.

It is possible to store the SX2 broth for 72 h at 5°C ± 3°C.

2.1.3 Restrictions

There is no restriction.

2.2 Reference methods♦

The reference methods used for the previous studies were:

- the EN ISO 6579 (December 2002): Microbiology of food and animal feeding stuffs - Horizontal method for the detection of *Salmonella* spp.;
- the ISO 6579-1 (February 2017) - Microbiology of food and animal feeding stuffs - Horizontal method for the detection, enumeration and serotyping of *Salmonella* spp. - Part 1: detection of *Salmonella* spp.

The same sample size was tested for the reference and the alternative methods, *i.e.* 25 g or 375 g.

Note: For cocoa and chocolates category, Brilliant Green was not added in the enrichment broth as the tested matrices did not contain high background microflora.

For the renewal study, the reference method was the ISO 6579-1/A1 (March 2020): Microbiology of the food chain - Horizontal method for the detection, enumeration and serotyping of *Salmonella* spp. - Part 1: detection of *Salmonella* spp. Amendment 1: Broader range of incubation temperatures, amendment to the status of Annex D, and correction of the composition of MSRV and SC. The flow diagram is given in **Appendix 2**.

The modifications which occur in the version published in 2017 and 2020 are considered as minor and have no impact on the previous data.

2.3 Study design

The study is a **paired study design** as the reference and the alternative methods have the same enrichment procedure.

In particular, for categories cocoa/chocolates, milk powders and pet food, the same sample size (375 g) was applied for both methods.

3 INITIAL VALIDATION AND EXTENSION/RENEWAL STUDIES: RESULTS

3.1 Method comparison study

The method comparison study is a study performed by the expert laboratory to compare the alternative method with the reference method.

The study was carried out on a diversity of samples and strains representative of agri-food products. This does not constitute an exhaustive list of the different matrices included in the scope.

For any comment on the alternative method, please contact AFNOR Certification at <http://nf-validation.afnor.org/contact-2/>.

3.1.1 Sensitivity study

The sensitivity (SE) is the ability of the method to detect the analyte by either the reference or alternative method.

3.1.1.1 Number and nature of samples

Taking into account all the categories, 618 samples were tested providing 290 positive and 328 negative results.

The distribution per tested category and type is given in Table 2.

Table 2 – Distribution per tested category and type

Category	Type	Positive samples	Negative samples	Total
1 Meat products	a Raw meats	13	28	41
	b Poultry	10	13	23
	c Delicatessen	10	10	20
	Total	33	51	84
2 Dairy products	a Raw milk cheese	11	13	24
	b Pasteurized milk cheese and dairy desserts	10	10	20
	c Milk and milk powders	10	16	26
	Total	31	39	70
3 Seafood and vegetables	a Fish fillets and shellfish	10	17	27
	b Raw vegetables and cocoa/chocolate	10	10	20
	c Ready -to-eat vegetables	10	20	30
	Total	30	47	77
4 Miscellaneous	a Eggs and egg-based products	15	6	21
	b Pastries	7	15	22
	c Ready-to-eat meals	8	12	20
	Total	30	33	63
5 Feed products	a Wet pet food and raw meat for animals	10	10	20
	b Cattle cakes	10	10	20
	c Meals and dry pet food	10	13	23
	Total	30	33	63
6 Production environmental samples	a Various water	10	14	24
	b Surface samples	11	11	22
	c Residues and scraps	11	9	20
	Total	32	34	66
7 Cocoa and chocolate (375 g)	a Cocoa powders	16	7	23
	b Chocolates	9	11	20
	c Raw materials	8	12	20
	Total	33	30	63
8 Milk powders (375 g)	a Milk powders	11	10	21
	b Infant formula without probiotics	11	10	21
	c Infant formula with probiotics	10	10	20
	Total	32	30	62
9 Pet food (375 g)	a Wet pet food	17	12	29
	b Dry pet food	11	10	21
	c Raw material	11	9	20
	Total	39	31	70
All categories		290	328	618

3.1.1.2 Artificial contamination of samples

Artificial contaminations were done by spiking or seeding protocol. Strains were injured using different protocols and the injury efficiency was evaluated. The artificial contaminations are presented in **Appendix 3**.

318 samples were artificially contaminated. 235 gave a positive result. 55 samples were naturally contaminated.

During the previous studies, 172 samples were inoculated at a level ≤ 5 CFU; 55 gave negative results. This represents 32 % of the inoculated samples and explains the fact that more than 20 % of the samples were inoculated between 3 or 5 CFU and 10 CFU, percentage accepted by the AFNOR Technical Committee. 11 chocolate samples inoculated at a high level (between 10 and 30 CFU) gave negative results. For the milk powders category, 22 samples inoculated at a low level (≤ 3 CFU) gave negative results.

The repartition of the positive samples per contamination type (natural and artificial) is given in Table 3.

Table 3 - Repartition of the positive samples per inoculation protocol and inoculation level

	Inoculation protocol					Naturally contaminated	Total		
	Spiking			Seeding					
	≤ 5 CFU	$5 < x \leq 10$	$10 < x \leq 30$	≤ 3 CFU	$3 < x \leq 10$				
Number of positive samples	70	53	15	76	21	55	290		
%	24.1	18.3	5.2	26.2	7.2	19.0	100		

19.0 % of the samples were naturally contaminated.

3.1.1.3 Protocols applied during the validation study

Incubation time

The minimum incubation times were applied:

- BPW : 16 h at $37^{\circ}\text{C} \pm 1^{\circ}\text{C}$
- SX2: 22 h at $41.5^{\circ}\text{C} \pm 1^{\circ}\text{C}$

Confirmations

In 2005 and 2007, the positive samples were confirmed by streaking the SX2 broth onto XLT4, XLD and SMID2.

For the extension study (2020), 10 μL of non-heated SX2 broth were streaked onto ASAP.

Typical colonies were confirmed without purification step by:

- Biochemical gallery on isolated colony without purification step;
- Latex test (AES Chemunex Ref MGN F42) on isolated colony with or without purification step from ASAP.

For the renewal and extension studies (2017 and 2020), as the number and duration of the enrichment steps were equivalent between the reference and the alternative methods, no additional confirmation was implemented for the samples in negative agreement.

SX2 storage for 72 h at 5°C ± 3°C

The SX2 broths from positive samples were stored for 72 h at 5°C ± 3°C before performing the ELISA and confirmatory tests.

3.1.1.4 *Test results*

Raw data are given in **Appendix 4**. A summary of the results obtained with the reference and the alternative methods is given in Table 4.

**Table 4 – Summary of results obtained
with the reference and the alternative methods**

* PPNA not included

** PPND not included

The results obtained for all categories are the following (See Table 6).

Table 6 - Summary of results

Sensitivity for the alternative method	$SE_{alt} = \frac{(PA + PD)}{(PA + ND + PD)} \times 100\%$	97.2 %
Sensitivity for the reference method	$SE_{ref} = \frac{(PA + ND)}{(PA + ND + PD)} \times 100\%$	99.3 %
Relative trueness	$RT = \frac{(PA + NA)}{N} \times 100\%$	98.4 %
False positive ratio for the alternative method* FP = PPNA + PPND	$FPR = \frac{(FP)}{NA} \times 100\%$	0.0 %

With $ND = ND + PPND$
 $NA = NA + PPNA$

3.1.1.6 Analysis of discordant results

Eight negative deviations (See Table 7) and two positive deviations (See Table 8) were obtained and concern three naturally contaminated samples and seven artificially contaminated samples.

For two samples in negative deviation (5369 and 3260), the presence of *Salmonella* spp. was confirmed in the SX2 broth.

For two samples in negative deviation (L1 and 346), the *Salmonella* spp. was recovered only in the MKTTn of the reference method.

As it is a paired study design, the discordant results could be explained by a low contamination level in the enriched samples.

Table 7 - Negative deviations

All categories		2	8	0	6	7*	10	22*	

* AL from the AFNOR rules as ISO 16140-2:2016 gives data for up to 8 categories only.

The observed values for ((ND + PPND) - PD) and (ND + PPND + PD) meet the acceptability limit for each individual category and for all the combined categories.

3.1.1.7 Confirmations

Three selective agar plates were tested during the initial validation study, *i.e.* XLT4, XLD and SMID2; the same results were obtained for the three media.

All the positive VIDAS tests were confirmed. For sample A12, the confirmation was possible only after storage of the SX2 broth for 72 h at $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$. and for sample A13 (Mayonnaise), a regrowth step in RVS step was applied to recover the strain in the enrichment broth.

For the renewal and extension studies (2017), ASAP and SMID plates were used. For 3 samples (4642: raw milk, 4705: sprouts and 2640: cocoa beans), typical colonies were observed only on ASAP plates.

For this extension study (2020), ASAP plates were used; all the positive VIDAS tests were confirmed.

3.1.1.8 SX2 broth storage at $5 \pm 3^{\circ}\text{C}$ for 72 h

The SX2 broth from positive and discordant samples was tested again after storage for 72 h at $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$; this was done for 502 samples. Only one change was observed (See Table 10).

Table 10 - Enrichment broth storage

Sample No	Product	Before SX2 storage	After SX2 storage
D2	Fish fillet	NA	PD

The analyses of discordant results after storage for 72 h at $5^{\circ}\text{C} \pm 3^{\circ}\text{C}$ become (See Table 11).

Table 11 - Analysis of discordant after storage 72 h at 5 ± 3°C

* AL from the AFNOR rules as ISO 16140-2:2016 gives data for up to 8 categories only.

The observed values for ((ND + PPND) - PD) and (ND + PPND + PD) meet the acceptability limit for each individual category and for all the combined categories.

3.1.2 *Relative level of detection*

The relative level of detection is the level of detection at P = 0.50 (LOD₅₀) of the alternative (proprietary) method divided by the level of detection at P = 0.50 (LOD₅₀) of the reference method.

The RLOD is defined as the ratio of the alternative and reference methods:

$$RLOD = \frac{LOD_{Alt.}}{LOD_{Ref.}}$$

3.1.2.1 *Experimental design*

For the initial validation study (2005) and extension study (2007), six (matrix/strain) pairs were analyzed by the reference method and by the alternative method using the protocol described in the EN ISO 16140 (2003):

- 6 non-inoculated samples;
- 6 samples providing between 0 and 50 % positive results;
- 6 samples providing between 50 and 100 % positive results;
- 6 samples providing 100 % positive results.

For the renewal and extension study (2017), two matrix/strain pairs were tested using the protocol described in the EN ISO 16140-2:2016:

- 5 negative samples,
- 20 samples inoculated at a level providing fractional positive results;
- 20 samples inoculated at a higher level.

For the extension study performed in 2020 for pet food (375 g), one matrix strain/pair was tested using the following protocol:

- Unspiked samples: 5 replicates;
- Inoculation level providing fractional positive results: 20 replicates;
- Higher inoculation level: 5 replicates.

The following matrix/strain pairs were tested (See Table 12).

Table 12 - Matrix/strain pairs

Category		Matrix	Strain inoculated	Origin	Storage conditions before analysis
1	Meat products	Poultry minced meat	<i>Salmonella</i> Hadar	Poultry meat	/
2	Dairy products	Raw milk	<i>Salmonella</i> Typhimurium	Raw milk cheese	/
3	Seafood and vegetables	Fish fillet	<i>Salmonella</i> Virchow	Shellfish	/
4	Miscellaneous	Liquid egg product	<i>Salmonella</i> Enteritidis	Liquid egg product	/
5	Feed products	Pâté for pet	<i>Salmonella</i> Senftenberg	Feed	/
6	Production environmental samples	Process water	<i>Salmonella</i> Infantis	Duck pond	/
7	Cocoa and chocolates (375 g)	Dark chocolate	<i>Salmonella</i> Typhimurium Ad2034	Cocoa beans	Spiking protocol Heat treatment
8	Milk powders (375 g)	Milk powder	<i>Salmonella</i> Mikawasima Ad1811	Raw milk	Seeding protocol Lyophilized strain 2 weeks at ambient temperature
9	Pet food (375 g)	Pellet for dog	<i>Salmonella</i> Senftenberg Ad2983	Raw material	Seeding protocol Lyophilized strain 2 weeks at ambient temperature

3.1.2.2 Calculation and interpretation of the RLOD

The raw data are given in **Appendix 5**.

The RLOD calculations were performed using the Excel spreadsheet available at <http://standards.iso.org/iso/16140> - RLOD (clause 5-1-4-2 Calculation and interpretation of RLOD) version 06.07.2015. The RLOD are given in Table 13.

Table 13 – Presentation of RLOD before and after confirmation of the alternative method results

Name	RLOD	RLODL	RLODU	b=ln(RLOD)	sd(b)	z-Test statistic	p-value
Poultry ground meat/ S. Hadar	1,000	0,446	2,240	0,000	0,403	0,000	1,000
Raw milk / S. Typhimurium	1,000	0,406	2,462	0,000	0,450	0,000	1,000
Fish fillet / S. Virchow	1,000	0,422	2,371	0,000	0,432	0,000	1,000
Liquid egg product / S. Enteritidis	1,000	0,388	2,575	0,000	0,473	0,000	1,000
Pâté for pet / S. Senftenberg	1,000	0,446	2,240	0,000	0,403	0,000	1,000
Process water / S. Infantis	1,000	0,406	2,462	0,000	0,450	0,000	1,000
Dark chocolate / S. Typhimurium Ad2034	1,000	0,421	2,376	0,000	0,433	0,000	1,000
Milk powder / S. Mikawasima Ad1811	1,000	0,523	1,912	0,000	0,324	0,000	1,000
Pellet for dog / S. Senftenberg Ad2983	1,000	0,444	2,253	0,000	0,406	0,000	1,000
Combined	1,000	0,770	1,298	0,000	0,131	0,000	1,000

The RLOD meet the acceptability limit fixed at 1.5 for a paired study design for all the tested matrix/strain pairs.

The LOD₅₀ % calculations according to Wilrich & Wilrich POD-LOD calculation program - version 10, 2021-04-05 test are given in Table 14.

Table 14 - LOD₅₀ results

Category	(Strain / matrix) pair	Level of detection at 50% (CFU / sample size) according to Wilrich & Wilrich ¹	
		Reference method	Alternative method
1	Poultry ground meat/ S. Hadar	0,3 [0,2-0,5]	0,3 [0,2-0,5]
2	Raw milk / S. Typhimurium	0,5 [0,3-0,8]	0,5 [0,3-0,8]
3	Fish fillet / S. Virchow	0,5 [0,3-0,9]	0,5 [0,3-0,9]
4	Liquid egg product / S. Enteritidis	0,5 [0,3-0,8]	0,5 [0,3-0,8]
5	Pâté for pet / S. Senftenberg	0,5 [0,3-1,0]	0,5 [0,3-1,0]
6	Process water / S. Infantis	0,4 [0,2-0,8]	0,4 [0,2-0,8]
7	Dark chocolate / S. Typhimurium Ad2034	1,2 [0,6-2,3]	1,2 [0,6-2,3]
8	Milk powder / S. Mikawasima Ad1811	1,0 [0,6-1,6]	1,0 [0,6-1,6]
9	Pellet for dog / S. Senftenberg Ad2983	1,7 [0,9-3,2]	1,7 [0,9-3,2]
Combined		0,7 [0,6-0,8]	0,7 [0,6-0,8]

The LOD₅₀ varies from 0.3 to 1.7 CFU/sample size for the reference and the alternative methods.

¹ Wilrich, C., and P.-Th. Wilrich: Estimation of the POD function and the LOD of a qualitative microbiological measurement method. AOAC International **92** (2009) 1763 - 1772.

3.1.3 Inclusivity / exclusivity

The inclusivity is the ability of the alternative method to detect the target analyte from a wide range of strains. The exclusivity is the lack of interference from a relevant range of non-target strains of the alternative method.

3.1.3.1 Test protocols

Inclusivity

The *Salmonella* strains were cultured in buffered peptone water for 24 h at 37°C. Dilutions were done in order to inoculate between 10 to 100 cells/225 ml BPW (incubation for 16 h at 37°C). A subculture in SX2 broth was then performed before proceeding to the VIDAS SLM test.

51 *Salmonella* strains were tested in 2005 by IPL.

9 *Salmonella* strains were tested in 2009 by IPL and 3 strains in 2013 by ADRIA Développement.

39 *Salmonella* strains were tested in 2017 by ADRIA Développement for the renewal study.

Exclusivity

30 negative strains were cultivated and diluted in buffered peptone water to obtain levels of around 10^5 cells per mL. After incubation of the buffered peptone water, a VIDAS SLM test was performed.

30 negative strains were tested in 2005 by IPL.

6 negative strains were tested in 2013 by ADRIA Développement.

3.1.3.2 Results and conclusion

The results are presented in **Appendix 6**.

Inclusivity

The 102 *Salmonella* strains tested gave a positive result.

Strains belonging to *Salmonella* Typhi (one strain) and Paratyphi (three strains) serotypes were tested and gave positive results using the complete protocol of the alternative method.

Exclusivity

No cross reaction was obtained with the 36 non-target strains tested only using the VIDAS SLM test except for 3 strains: *Citrobacter diversus* CIT 30 and EN52 and *Citrobacter freundii* CIT23. These strains were tested with the complete protocol of the alternative method and the results for the two strains of *Citrobacter diversus* remained positive. However, the streaking of the SX2 broth on *Salmonella* selective media gave non-typical colonies.

3.1.4 Extension study for using the *Salmonella* spp. latex test (ref. MGNF42) for confirmation of characteristic colonies on ASAP and TSA (ADRIA Développement, 2014)

The aim of the study was to assess the inclusivity, exclusivity and sensitivity of the new confirmation procedure in comparison to the ISO 6579 standard.

3.1.4.1 Strains

150 positive and 100 negative strains were tested. The study design is summarized in **Appendix 7**.

3.1.4.2 Results

Inclusivity

The raw data are gathered in **Appendix 8**. A summary is presented in Table 15.

Table 15

	Agars		
	TSA	ChromID Salmonella	ASAP
Number of positive Latex tests	105	109	102
Number of negative Latex tests	45	41	47
No growth	0	0	1 (84+)*
Total	150	150	150

* Target strain n° 84: *Salmonella* Luciana CIP 105629

The list of the strains which showed negative latex tests depending on the selective agar is available in **Appendix 9**.

Differences are observed depending on the selective agar used to streak the strains: chromID Salmonella agar provided the best data. 109 strains provided a positive latex test on the 150 tested strains.

Note that one strain (*Salmonella* Luciana CIP 105629) did not grow on ASAP plates after culture in SX2 broth; however, growth was observed after culture in BHI broth.

Exclusivity

The raw data are presented in **Appendix 10**. A summary is available in Table 16.

Table 16

	Agars		
	TSA	ChromID <i>Salmonella</i>	ASAP
Positive VIDAS test			0
+/- characteristic colonies	/	7	4
No growth	0	11	20
Number of positive or doubtful latex tests	19	7	10
+/- characteristic colonies and doubtful or positive latex tests	/	1 (3) **	3 (3-4-91) **

** Non target strains:
 3: *Aeromonas punctata* Ad 1517
 4: *Aeromonas salmonicida* Ad 1319
 91: *Serratia marcescens* Ad 447

All the tested strains gave a negative VIDAS test.

Doubtful colonies were observed on chromogenic plates. Some of these strains gave positive or doubtful latex tests but a negative VIDAS test.

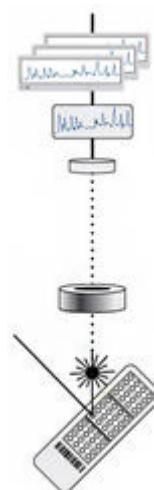

3.1.5 Extension study for using the VITEK MS for confirmation of characteristic colonies on ASAP and TSA (ADRIA Développement, 2015)

The VIDAS® Easy Salmonella method is validated since the 20th September 2005 with a confirmation step by streaking the SX2 broth onto selective agar plate, the tests described in the standard or by using a latex test.

This extension study was set up to allow the use of the VITEK MS, automated mass spectrometry microbial identification system that uses Matrix Assisted Laser Desorption Ionization Time-of-Flight (MALDI.TOF) technology and a comprehension database of relevant species.

The protocol is summarized below (See Figure 1).

Figure 1

1. The target slide is prepared and introduced to a high-vacuum environment.
2. A precise laser burst ionizes the sample.
3. A “cloud” of proteins is released and accelerated by an electric charge.
4. After passing through the ring electrode, the proteins’ Time of Flight is recorded using a formula from the time recorded.
5. Proteins are detected with a sensor to create a spectrum that represents the protein makeup of each sample.

The technology is dedicated to Salmonella spp confirmation and is not supposed to be used for further sub-species discrimination, serotyping or identification.

3.1.5.1 Strains

150 positive and 104 negative strains were tested.

3.1.5.2 Protocol

The VITEK MS Manual was already provided for the project presentation and is still available on the collaborative platform.

The protocol applied for the extension study is given in **Appendix 11**.

3.1.5.3 Results

The raw data are provided in **Appendix 12**.

Inclusivity

150 strains were tested; all the strains were confirmed as *Salmonella* spp, except in the cases summarized in Table 17.

Table 17

	Media	
	ASAP	TSA
Number of strains tested	150	150
Number of strains confirmed as <i>Salmonella</i> spp	148 ⁽¹⁾	146 ⁽¹⁾
Number of strains with no confirmation	2 (<i>S. houtenae</i> Ad 596, <i>S. arizonae</i> CIP 5522)	4 <i>(S. houtenae</i> Ad 596, <i>S. diarizonae</i> Ad 595, <i>S. diarizonae</i> Ad 1091, <i>S. diarizonae</i> Ad 1298)

⁽¹⁾ For one strain (*S. houtenae* Ad 597), two tests were needed to get a confirmation result.

Off the 150 strains tested, 148 were correctly confirmed as *Salmonella* when ASAP agar was used prior to VITEK® MS analysis. For two strains, (*S. houtenae* Ad 596 and *S. arizonae* CIP 5522), no results were obtained from the VITEK MS (No result).

Off the 150 strains tested, 146 were correctly confirmed as *Salmonella* when TSA was used prior to VITEK® MS analysis. For four strains (*S. houtenae*

Ad 596, *S. diarizonae* Ad 595, *S. diarizonae* Ad 1091, *S. diarizonae* Ad 1298), no results were obtained from the VITEK MS (No result).

Exclusivity

A summary of the results is given in Table 18.

Table 18

	Media	
	ASAP	TSA
Number of strains tested	104	104
Number of strains which did not grow on the plate	22	0
Number of strains which were not characteristic on the plates	82	Not applicable
Number of strains with no result	11	12
Number of strains confirmed as <i>Salmonella</i>	0	0

As already mentioned, the technology is here dedicated to *Salmonella* spp confirmation. Strains identification is of course related to the extension and the robustness of the database and is not the purpose of the study. Indeed, all the negative strains were either not able to grow on the tested agars, or not confirmed as *Salmonella* spp with the VITEK® MS.

3.1.5.4 Conclusion

All the 150 tested *Salmonella* strains were confirmed as *Salmonella* spp, except in two cases (*Salmonella houtenae* Ad 596 and *Salmonella arizona* CIP 5522) for which a “no result” was obtained.

Among the 104 tested negative strains, no confirmation as *Salmonella* genus was observed.

VITEK® MS is an accurate and rapid technology to confirm VIDAS Easy SLM positive presumptive results.

3.1.6 Practicability

The alternative method practicability was evaluated according to the AFNOR criteria relative to method comparison study.

Storage conditions, shelf-life and modalities of utilisation after first use	The storage temperature is of 2 – 8°C. The kit expiry date is shown on the box label and on the different vials. The kit components should be stored at 2 – 8°C.		
Time to results	Steps	<u>Time required</u> VIDAS Easy SLM method	<u>Time required</u> ISO 6579-1 reference method
	Realisation of pre-enrichment	D0	D0
	Transfer to selective broths (Rappaport-Vassiliadis Soja, MKTTn, SX2)	D1	D1
	VIDAS SLM procedure	D2	/
	Test result Negative result	D2	/
	Streaking selective broths onto selective agar plates	D2	D2
	Reading the plates Confirmation tests: identification strips, serology	D3 to D4	D3 to D4
	Negative result (after streaking and negative confirmation if done)	D3* to D7	D3 to D7
Common steps with the reference method	Pre-enrichment in BPW Confirmations	D3* to D7	D5 to D7

*: In case of latex test or Vitek MS is applied on typical colonies

3.1.7 Method comparison study conclusion

The VIDAS Easy Salmonella method shows satisfying relative sensitivity.

The RLOD are lower than the acceptability limit fixed at 1.5 for a paired study design for all the tested matrix/strain pairs

For the inclusivity and exclusivity study, the 100 *Salmonella* strains tested gave a positive result. No cross reaction was obtained with the VIDAS SLM test except for 3 strains: *Citrobacter diversus* CIT 30 and EN52 and *Citrobacter freundii* CIT23.

3.2 Inter-laboratory study

The inter-laboratory study is a study performed by multiple laboratories testing identical samples at the same time, the results of which are used to estimate alternative-method performance parameters.

3.2.1 Study organisation

Samples were sent to 15 laboratories. A pasteurised milk was inoculated with *Salmonella* Typhimurium from dairy origin. 24 samples were prepared per laboratory, and were distributed in 3 levels, with 8 samples per level and method.

3.2.2 Experimental parameters controls

3.2.2.1 Strain stability and background microflora stability

Strain stability was checked by performing detection analyses after 24 h and 48 h storage at $5 \pm 3^\circ\text{C}$; the results are given in Table 19.

Table 19 - Sample stability

Day	Reference method (detection)	Alternative method (detection)	Aerobic mesophilic flora (CFU/g)
Day 0	/	/	6
Day 1	+	+	7
Day 2	+	+	5

Enumeration was also performed on 6 ml of inoculated pasteurized milk.

No evolution was observed during storage at $5^\circ\text{C} \pm 3^\circ\text{C}$.

3.2.3 Contamination levels

The contamination levels and the sample codification were the following (see Table 20).

Table 20 - Contamination levels

Level	Samples	Theoretical target level (b/25 g)	True level (b/25 g sample)	Low limit / 25 g sample	High limit / 25 g sample
Level 0 (L0)	3-4-9-10-15-16-21-22	0	0	/	/
Low level (L1)	1-2-7-8-13-14-19-20	3	2.4	0.3	8.4
High level (L2)	5-6-11-12-17-18-23-24	30	25.3	16	37

3.2.4 Logistic conditions

Temperature conditions are given in Table 21.

Table 21 - Sample temperatures at receipt

Laboratory	Reception Temperatures (°C)		Comments
	communicated by the laboratory	indicated by the temperature probe	
A	-0.5°C	5.9°C	No frozen sample
B	2.4°C	1.2°C	/
C	0.0°C	-0.3°C	/
D	-0.7°C	0.7°C	No frozen sample
E	1.5°C	1.1°C	/
F	3.9°C	2.1°C	/
G	3.0°C	2.9°C	/
H	-2.0°C	1.7°C	Samples 5, 6, 9, 11, 12, 22 & 24 frozen
I	-0.4°C	0.6°C	No frozen sample
J	-0.5°C	0.3°C	No frozen sample
K	-1.5°C	0.1°C	Samples 15, 16, 21, 22 & 24 frozen
L	0.5°C	0.2°C	/
M	-1.2°C	-0.4°C	No frozen sample
N	-0.7°C	2.1°C	No frozen sample
O	/	4.1°C	Late delivery time, analyses not run

Some samples were frozen at receipt (Labs H and K). As the concerned samples were unspiked or spiked at a high level, the results from these labs were kept.

Among the 15 laboratories, laboratory O received his samples too late to realize the assays.

3.2.5 Results analysis

3.2.5.1 Expert laboratory results

The results obtained by the expert laboratory are given in Table 22.

Table 22 – Results obtained by the expert Lab.

Level	Reference method	Alternative method
L0	0/8	0/8
L1	8/8	8/8
L2	8/8	8/8

3.2.5.2 Results observed by the collaborative laboratories

Aerobic mesophilic flora enumeration

Depending on the Lab results, the enumeration levels varied from 1 CFU to 380 CFU/g.

Salmonella spp. detection

14 collaborators participated to the study. The results obtained for the reference method are provided in Table 23 (reference method) and Table 24 (alternative method).

Table 23 - Positive results by the reference method (ALL the collaborators)

Laboratory	Contamination level		
	L0	L1	L2
A	0	8	8
B	2	8	8
C	0	6	8
D	0	7	8
E	0	7	8
F	0	8	8

Total	P ₀ = 15	CP ₀ = 15	P ₁ = 107	CP ₁ = 111	P ₂ = 112	CP ₂ = 112

Labs B, F, H, J, K, L and M obtained respectively 2, 1, 1, 8, 1, 3 and 1 positive result on unspiked samples with one or both methods.

3.2.5.3 Results of the collaborators retained for interpretation

According to the AFNOR technical rules, it is possible to keep the results from a collaborator with only one contamination on control samples with one or both methods. The results from Labs B, J and L were not kept for interpretation. This means that finally the results from 11 Labs were kept.

The results obtained with the 11 labs kept for interpretation are presented in Table 25 (reference method) and Table 26 (alternative method).

Table 25 - Positive results by the reference method (With 11 Laboratories)

Laboratory	Contamination level		
	L0	L1	L2
A	0	8	8
C	0	6	8
D	0	7	8
E	0	7	8
F	0	8	8

3.2.6 Calculation and interpretation

3.2.6.1 Calculation of the specificity percentage (SP)

The percentage specificities (SP) of the reference method and of the alternative method, using the data after confirmation, based on the results of level L0 are the following (See Table 27).

Table 27 - Percentage specificity

Specificity for the reference method	$SP_{ref} = \left(1 - \left(\frac{P_0}{N_-}\right)\right) \times 100 \% =$	100 %
Specificity for the alternative method	$SP_{alt} = \left(1 - \left(\frac{CP_0}{N_-}\right)\right) \times 100 \% =$	100 %

N: number of all L0 tests

P_0 = total number of false-positive results obtained with the blank samples before confirmation

CP_0 = total number of false-positive results obtained with the blank samples

3.2.6.2 Calculation of the sensitivity (SE_{alt}), the sensitivity for the reference method (SE_{ref}), the relative trueness (RT) and the false positive ratio for the alternative method (FPR)

Fractional positive results were obtained for the low inoculation level (L1). These results were retained for calculation.

A summary of the results of the collaborators retained for interpretation, and obtained with the reference and the alternative methods for Level 1 is provided in Table 28.

Table 28 - Summary of the obtained results with the reference method and the alternative method for Level 1

Response	Reference method positive (R+)	Reference method negative (R-)
Alternative method positive (A+)	Positive agreement (A+/R+) PA = 83	Positive deviation (R-/A+) PD = 0
Alternative method negative (A-)	Negative deviation (A-/R+) ND = 0	Negative agreement (A-/R-) NA = 7

Based on the data summarized in Table 28, the values of sensitivity of the alternative and reference methods, as well as the relative trueness and false positive ratio for the alternative method taking account the confirmations, are the following (See Table 29).

Table 29 - Sensitivity, relative trueness and false positive ratio percentages

Sensitivity for the alternative method:	$SE_{alt} = \frac{(PA+PD)}{(PA+PD+ND)} \times 100\% =$	100.0 %
Sensitivity for the reference method:	$SE_{ref} = \frac{(PA+ND)}{(PA+PD+ND)} \times 100\% =$	100.0 %
Relative trueness	$RT = \frac{(PA+NA)}{N} \times 100\% =$	100.0 %
False positive ratio for the alternative method	$FPR = \frac{FP}{NA} \times 100\% =$	0

3.2.6.3 Interpretation of data

For a **paired study design**, the difference between (ND – PD) and the addition (ND + PD) are calculated for the level(s) where fractional recovery is obtained (so L_1 and possibly L_2). The observed value found for (ND – PD) and (ND + PD) shall not be higher than the AL.

For 11 Labs, the limits are the following:

	Calculated values	AL	Conclusion
ND - PD	0	4	ND - PD < AL
ND + PD	0	4	ND + PD < AL

The EN ISO 16140-2:2016 requirements are fulfilled as (ND - PD) and (ND + PD) are below the AL.

3.2.6.4 Evaluation of the LOD_{50%}, LOD_{95%} and RLOD between laboratories

The RLOD was calculated using the EN ISO 16140-2:2016 Excel spreadsheet available at https://standards.iso.org/iso/16140/-5/ed-1/en/RLOD_inter-lab-study_16140-2_AnnexF_ver1_28-06-2017.xls. The results are used only for information (see Table 30) and calculated with data obtained with 4 collaborators only.

Table 30 - LOD_{50%}, LOD_{95%} and RLOD

Method	LOD 50%	LOD 95%	RLOD
Reference	0.63 [0.44;0.91]	2.72 [1.89;3.93]	1.00 [0.65;1.53]
Alternative			

3.2.6.5 Inter-laboratory study conclusion

The data and interpretations comply with the EN ISO 16140-2:2016 requirements. The **VIDAS Easy *Salmonella* method** is considered equivalent to the ISO standard.

3.3 General conclusion

The **method comparison study conclusions** are:

- ☒ The method comparison study scheme corresponds to a PAIRED STUDY design as the alternative and reference methods have a common enrichment procedure.
- ☒ In the sensitivity study, 9 categories were tested: 6 food categories, feed, pet food and production environmental samples. The protocol of the alternative method shows 2 positive deviations (PD) and 8 negative deviations (ND) for the over all categories. The ND - PD and ND + PD meet the acceptability limits (AL) whatever the categories, and as well for the 9 tested categories.
- ☒ The Relative Levels of Detection (RLOD) are lower than the acceptability limit fixed at 1.5 for a paired study design for all the tested matrix/strain pairs.
- ☒ For the inclusivity and exclusivity study, the 102 *Salmonella* strains tested gave a positive result. No cross reaction was obtained with the VIDAS SLM test applied on 36 non-target strains except for 3 strains: *Citrobacter diversus* CIT 30 and EN52 and *Citrobacter freundii* CIT23 but streaking onto selective agars concluded to negative results.
- ☒ The alternative method allows a two-days screening of the negative samples. Confirmed positive results are obtained in 3 days when using latex test or the VITEK-MS for confirmation of colonies.
- ☒ The alternative method fulfils all the EN ISO 16140-2:2016 and AFNOR technical rules (PR revision 7).

The **inter-laboratory study conclusions** are:

- The data and interpretations comply with the EN ISO 16140-2:2016 requirements. **The VIDAS Easy *Salmonella* method is considered equivalent to the ISO standard**

I hereby attest to the validation of the results of the analyses carried out under the COFRAC accreditation.

I hereby attest to the validation of the verification of the conformity of the report (opinion and interpretation).

**Appendix 1 – Flow diagram of the alternative method:
VIDAS Easy Salmonella**

² Or specific enrichment according to ISO 6887

³ For sampling after cleaning process premoisten

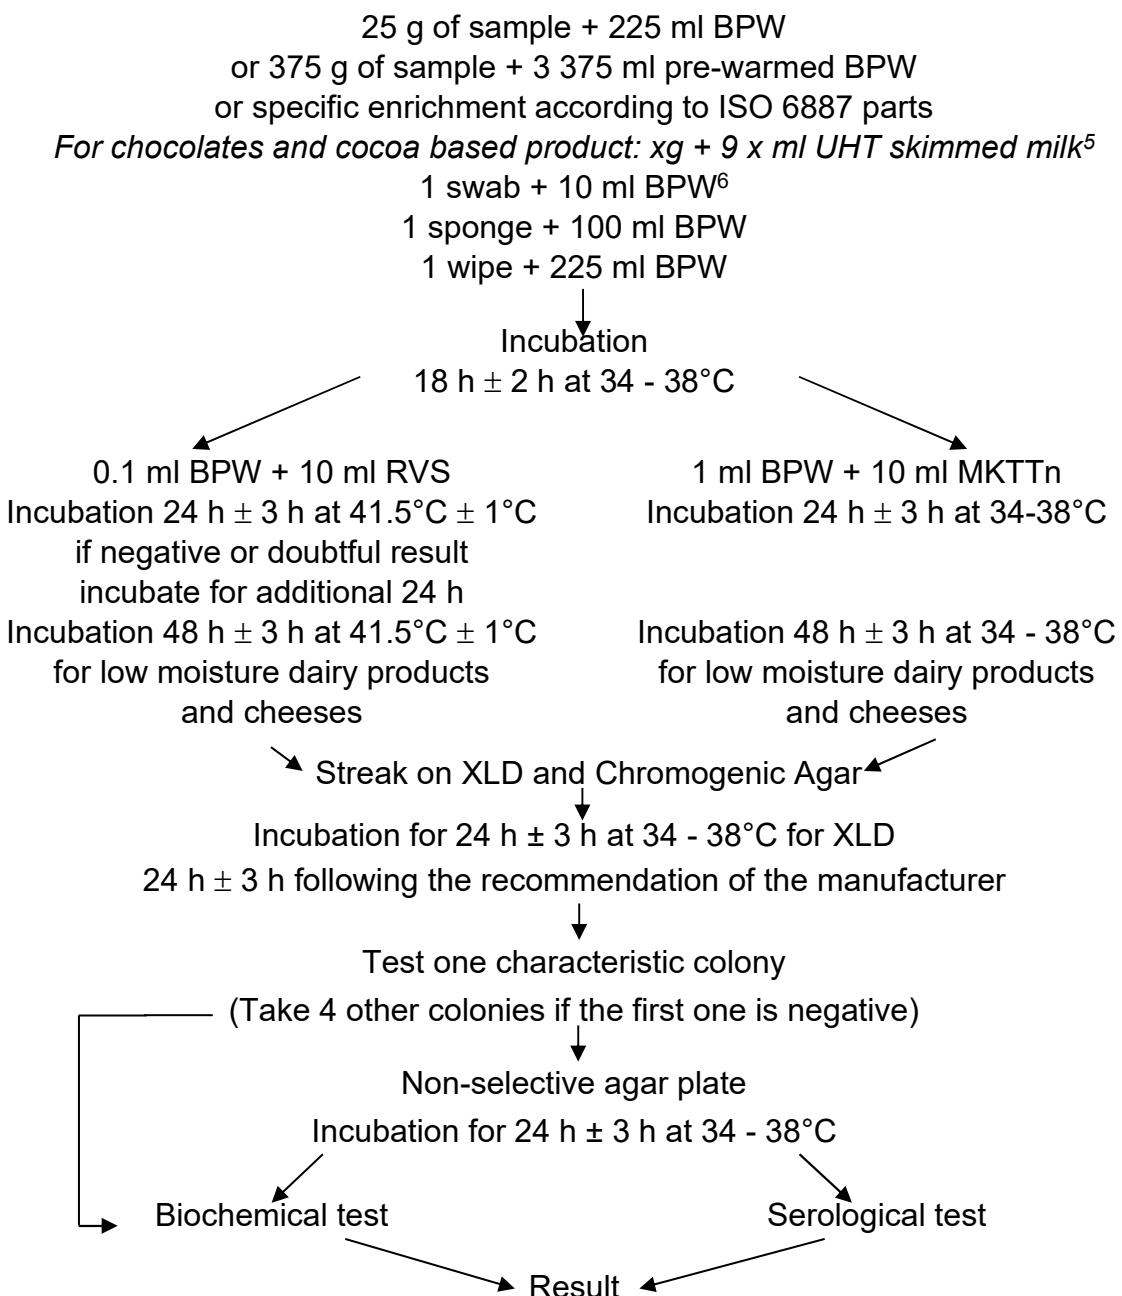

- 1 swab + 1 ml broth universal neutralizing (+ 9 ml BPW)
- 1 sponge + 10 ml broth universal neutralizing (+ 90 ml BPW)
- 1 wipe + BPW + 10 % neutralizing agent (+ 225 ml BPW)

⁴ Tested during the validation study

Appendix 2 – Flow diagram of the reference method

ISO 6579-1 (February 2017): Microbiology of the food chain - Horizontal method for the detection, enumeration and serotyping of *Salmonella* spp. - Part 1: detection of *Salmonella* spp.

ISO 6579-1/A1 (March 2020): Microbiology of the food chain - Horizontal method for the detection, enumeration and serotyping of *Salmonella* spp. - Part 1: detection of *Salmonella* spp. Amendment 1: Broader range of incubation temperatures, amendment to the status of Annex D, and correction of the composition of MSRV and SC

⁵ For chocolates products containing > 20 % fat, unless the products already contain sufficient emulsifier, add Tween 80

For products with high background microflora add Brilliant green (0.018g/L)

⁶ For sampling after cleaning process premoisten

- 1 swab + 1 ml broth universal neutralizing (+ 9 ml BPW)
- 1 sponge + 10 ml broth universal neutralizing (+ 90 ml BPW)
- 1 wipe + BPW + 10 % neutralizing agent (+ 225 ml BPW)

Appendix 3 – Artificial contamination of samples

Sample No	Product (in French)	Product	Artificial contaminations					Global result

Appendix 4 – Sensitivity study: raw data

(Study realized by IPL and by ADRIA Développement - Renewal and extension studies 2017, extension study 2020)

IPL's legend

Total bacteria growth

Ø : no growth

L = low

M = medium

H = high

Distribution of flora

A = pure culture of suspicious colonies

B = mix with a majority of suspicious colonies

C = mix with a minority of suspicious colonies

D = mix with rare suspicious colonies

E = absence of suspicious colonies

(x) : x characteristic colonies of *Salmonella* if $x \leq 5$

a : reincubation of SX2 broth

b : subculture of SX2 broth in RVS broth

ADRIA's legend

m:	minority level of target analyte
M :	majority level of target analyte
P:	pure culture level of target analyte
1/2 :	50% level of target analyte
-:	no typical colonies but presence of background microflora
st:	plate without any colony
d:	doubtful result
PA:	positive agreement
NA:	negative agreement
ND:	negative deviation
PD:	positive deviation
PPNA:	positive presumptive negative agreement
PPND :	positive presumptive negative deviation

Analyses performed according to the COFRAC accreditation (study realized by ADRIA Développement, Renewal and extension studies (2017))
