NF VALIDATION
Validation of alternative analysis methods
Application to the food industry

Summary report
according to the standard EN ISO 16140-2:2016

Qualitative method

One Broth One Plate for Listeria (OBOP-L)
(certificate # NEO 35/05-07/16)
for the detection of *Listeria* spp in human food products and in environmental samples

Expert laboratory: MICROSEPT
ZA de la Sablonnière
15 rue Denis Papin
49220 LE LION D'ANGERS
FRANCE

For: NEOGEN
The Dairy School, Auchincruive
Ayr, KA6 5HU
Scotland, UK

This report contains 88 pages, including 57 pages of appendices.

Version 0 June 20, 2024

Preamble

- **Protocols of validation:**

- **EN ISO 16140-1 and EN ISO 16140-2 (September 2016): Microbiology of the food chain — Method validation**
  Part 1: Vocabulary.
  Part 2: Protocol for the validation of alternative (proprietary) methods against a reference method.

- **Requirements regarding comparison and interlaboratory studies for implementation of the standard EN ISO 16140-2 (project version 7).**

- **Reference method:**

- **EN ISO 11290-1 (July 2017):** Microbiology of the food chain - Horizontal method for the detection and enumeration of *Listeria monocytogenes* and of *Listeria* spp- Part 1: Detection method.

- **Application scope:**

- **All human food products** by a validation testing of a broad range of foods, including:
  - meat products,
  - milk and dairy products,
  - fish and seafood,
  - vegetables,
  - composite foods,
- **Environmental samples.**

- **Certification body:**

- **AFNOR Certification** (https://nf-validation.afnor.org/).

Definitions

- **Method comparison study**

The method comparison study is the part of the validation process that is performed in the organizing laboratory. It consists of three parts namely the following:
- A comparative study of the results of the reference method to the results of the alternative method in (naturally and/or artificially) contaminated samples (so-called sensitivity study);
- A comparative study to determine the relative level of detection (RLOD) in artificially contaminated samples (so-called RLOD study);
- An inclusivity/exclusivity study of the alternative method.

  - **Sensitivity study**

The sensitivity study aims to determine the difference in sensitivity between the reference and the alternative method.
The sensitivity is the ability of the reference method or alternative method to detect the analyte.

  - **Relative level of detection study**

A comparative study is conducted to evaluate the level of detection (LOD) of the alternative method against the reference method. The evaluation is based on the calculation of the relative level of detection (RLOD).
The level of detection at 50% (LOD_{50}) is the measured analyte concentration, obtained by a given measurement procedure, for which the probability of detection is 50%.
The relative level of detection level of detection at P = 0,50 (LOD_{50}) of the alternative method divided by the level of detection at P = 0,50 (LOD_{50}) of the reference method.

  - **Inclusivity and exclusivity study**

The inclusivity study is a study involving pure target strains to be detected or enumerated by the alternative method.
The exclusivity study is a study involving pure non-target strains, which can be potentially cross-reactive, but are not expected to be detected or enumerated by the alternative method.

- **Interlaboratory study**

The interlaboratory study is a study performed by multiple laboratories testing identical samples at the same time, the results of which are used to estimate alternative-method performance parameters.
The aim of the interlaboratory study is to determine the difference in sensitivity between the reference and the alternative method when tested by different collaborators using identical samples (reproducibility conditions).

Table of contents

Appendices

1. Introduction

The present document is a summary report and summarizes the results of the studies for the validation according to the ISO 16140-2 standard of the ONE Broth One Plate for *Listeria* method (OBOP-L), formerly called LESS Plus method, for the detection of *Listeria* spp, as part of its NF Validation certification.

The OBOP-L method is certified NF Validation according to the ISO 16140-2:2016 standard under the certification number NEO 35/05-07/16 for the detection of *Listeria* spp in a broad range of foods and in environmental samples.

Table 1 summarizes the different steps of the validation that occurred since the initial validation.

Table 1: validation history

Date	Study	Expert Laboratory	Standards
July 2016	Initial validation for the detection of *Listeria* spp	ADRIA Développement	- ISO/FDIS 16140-2:2015 - ISO 11290-1/A1:2005
March 2020	First renewal study without modification	Microsept	- ISO 16140-2:2016 - ISO 11290-1:2017
June 2024	Second renewal study without modification	Microsept	- ISO 16140-2:2016 - ISO 11290-1:2017

The results set out in this report were produced during validation tests carried out by ADRIA Développement as part of NF Validation, in accordance with prevailing requirements.

2. Protocols of the methods

2.1. Alternative method

2.1.1. Principle of the alternative method

The method utilises Neogen's proprietary LESS Plus broth for the enrichment steps as this provides high recovery of *Listeria* species in foods and environmental samples.
The enrichment is followed by a detection using *Listeria* Chromogenic Agar (according to the formulation of Ottaviani and Agosti), a selective medium for the isolation and presumptive identification of *Listeria* spp and *Listeria monocytogenes* from foodstuffs and related materials as described in ISO 11290-1:2017 or Palcam.

2.1.2. Protocol of the alternative method

The validated protocol is as follows:

- Enrichment step in LESS Plus broth for 25±3 h at 30±1°C
- Streaking of 100 µl of enriched broth onto Ottaviani and Agosti (O&A) or Palcam agar media,
- Incubation of the plates at 37±1°C
- Reading of the plates after 24 to 48 h. It is not necessary to prolong the incubation to 48 h for the plates screened at 24 h whatever the result of the screening, except for Palcam needing 48 h for a final reading,
- Confirmation tests as described in the ISO 11290-1:2017 method.

The protocol of the method is set out in Appendix A.

2.2. Reference method

Assays of the initial validation for the general protocol were performed according to the EN ISO 11290-1/A1:2005 standard "Horizontal method for the detection and enumeration of *Listeria monocytogenes* - Part 1: Detection method".
This standard was updated in 2017, that's why the method described in the new standard EN ISO 11290-1:2017 "Horizontal method for the detection and enumeration of *Listeria monocytogenes* and of *Listeria* spp – Part 1: detection method" will be considered as the reference method as part of the current renewal study performed by the Laboratory Microsept.

Further explanations regarding this update are provided in paragraph 9.2.
The analytical scheme of the reference method is presented in Appendix B.

2.3. Restriction

There is no restriction on use for the OBOP-L method for the detection of *Listeria* spp.

2.4. Study design

As there is no shared enrichment step for both the alternative and the reference methods, different test portions coming from the same batch or lot of product have to be used for the two methods. The study thus provides unpaired data and the expression "unpaired study" is used to describe the study design.

3. Method comparison study

3.1. Sensitivity study

The study was conducted on a variety of samples and strains representative of food products. This is not an exhaustive list of the various matrices included in the application scope. For any remark on the alternative method, you can contact AFNOR Certification by connecting to the Internet page ***http://nf-validation.afnor.org/contact-2/***.

3.1.1. Number and nature of samples

449 samples contaminated and non-contaminated with *Listeria* spp were tested using both the reference method and the OBOP-L method for the detection of *Listeria spp*.
The different kinds of samples analyzed are presented in table 2.

Table 2: Number and nature of samples analyzed for all categories ([1] : positive by any method)

Category		Type	Number of positive results[1]	Number of negative results	Total
Composite foods ❶	a	Ready-to-eat	9	13	22
	b	Ready-to-reheat	16	14	30
	c	Confectionaries, pastries and egg prod.	8	23	31
		Total	**33**	**50**	**83**
Meat products ❷	a	Raw products (frozen or fresh)	19	9	28
	b	Meat based products ready to reheat	7	14	21
	c	Raw and cooked delicatessen	9	13	22
		Total	**35**	**36**	**71**
Milk & dairy products ❸	a	Raw milk cheeses	10	24	34
	b	Other products based on raw milks	11	13	24
	c	Heat treated dairy products	10	17	27
		Total	**31**	**54**	**85**
Vegetables ❹	a	Raw products (fresh and frozen)	11	12	23
	b	Pre-cooked vegetables, vegetables under modified atmosphere	9	12	21
	c	RTE	11	10	21
		Total	**31**	**34**	**65**
Fish and seafood ❺	a	Raw products (fresh and frozen)	8	13	21
	b	Cured & smoked	11	9	20
	c	Ready-to-eat, Ready to reheat	13	16	29
		Total	**32**	**38**	**70**
Environmental samples ❻	a	Process & cleaning waters	11	13	24
	b	Dusts and residus	8	12	20
	c	Surface sampling	11	20	31
		Total	**30**	**45**	**75**
TOTAL			**192**	**257**	**449**

The distribution per target analyte is given in table 3.

Table 3: Distribution per target analyte

Category	*Listeria* spp	*Listeria* spp + *Listeria monocytogenes*	*Listeria monocytogenes*
Composite foods	9	0	24
Meat products	11	11	13
Milk and dairy products	12	1	18
Vegetables	20	2	9
Fish and seafood	3	12	17
Environmental samples	9	4	17
TOTAL	64	30	98

3.1.2. Artificial contamination of samples

Artificial contamination was carried out using stressed strains in accordance with the requirements of the ISO 16140-2:2016 standard and of the requirements of the AFNOR Validation Technical Board linked to this standard.

A total of 110 samples were artificially contaminated, using 57 different strains:

- 88 gave a positive result, among which:
  - 73 samples were inoculated at a level ≤ 3 CFU / test portion,
  - 15 samples were inoculated between 3,2 and 6,6 CFU / test portion.

The samples and the strains used for the artificial contaminations are presented in Appendix C.

In total, 104 positive results out of 192 were obtained from naturally contaminated samples, i.e. 54,2%.

3.1.3. Confirmation protocols

The typical colonies were identified by the tests described in the reference method.

The LESS Plus broths of negative samples of the alternative method were subcultured in Fraser broth incubated for 48 h at 37°C prior streaking onto O&A and Palcam plates, in order to verify the presence of *Listeria* spp in the enrichment broths.

3.1.4. Results

Raw data are shown in Appendix D.

Table 4 shows the results for the two methods.

Table 4: results of the sensitivity study for both methods (R+/-: reference method positive or negative, A+/-: alternative method positive or negative, PA: positive agreement, NA: negative agreement, ND: negative deviation, PD: positive deviation, PP: presumptive positive before confirmation)

Category	Response	Ottaviani & Agosti		Palcam	
		R+	R-	R+	R-
Composite foods ❶	A+	PA = 18	PD = 8	PA = 18	PD = 7
	A-	ND = 7 incl. 0 PPND	NA = 50 incl. 1 PPNA	ND = 7 incl. 0 PPND	NA = 51 incl. 0 PPNA

3.1.5. Calculation of relative accuracy (AC), relative sensitivity (SE) and false positive ratio (FP)

All results were used to calculate the sensitivity for the alternative method and the reference method, the relative trueness and the false positive ratio.

Table 5 presents the results for the Ottaviani and Agosti agar media and table 6 the results for the Palcam agar media.

Table 5: values in % of sensitivity compared to OAA, relative trueness and false positive ratio for the alternative method (SE_{alt}: sensitivity for the alternative method, SE_{ref}: sensitivity for the reference method, RT: relative trueness, FPR: false positive ratio for the alternative method)

Category		Type	PA	NA	PD	ND	PPND	PPNA	SE_{alt} %	SE_{ref} %	AC %	FP %
Composite foods ❶	a	Ready-to-eat	2	13	5	2	0	0	77.8	44.4	68.2	0.0

Table 7 summarizes the calculated parameters for all categories per kind of samples.

Table 7: parameters for all categories per kind of agar media (ND=ND+PPND, NA=NA+PPNA)

Parameter	Formula EN ISO 16140-2 :2016	Value OAA	Value Palcam
Sensitivity of the alternative method (SE_{alt})	$SE_{alt} = \frac{(PA + PD)}{(PA + ND + PD)} \times 100\ \%$	**83.8 %**	**84.2 %**
Sensitivity of the reference method (SE_{ref})	$SE_{ref} = \frac{(PA + ND)}{(PA + ND + PD)} \times 100\ \%$	**78.5 %**	**78.9 %**
Relative trueness (RT)	$RT = \frac{(PA + NA)}{N} \times 100\ \%$	**84.0 %**	**84.4 %**
False positive ratio (FPR) False positive results are the sum of PPNA and PPND	$FPR = \frac{FP}{NA} \times 100\ \%$	**1.6 %**	**0 %**

3.1.6. Analysis of discordant results

The distribution of the negative and positive deviations per selective agar media used and per type of contamination is summarized in table 8.

Table 8: distribution of positive and negative deviations

Contamination	Negative deviations		Positive deviations	
	O&A	Palcam	O&A	Palcam
Artificial	23	21	18	18
Natural	8	9	23	22
Total	**31**	**30**	**41**	**40**

Among the 31 negative deviations observed, a *Listeria* spp strain was recovered in the enrichment broth only in one case (sample # 4418) when using the protocol of the reference method (subculture in Fraser broth for 48 h at 37°C prior streaking onto O&A and Palcam plates).

No additional confirmation was obtained using the ISO method protocol from the LESS Plus broth from samples with negative agreement.

The number of observed deviations confirms the low level of the inoculation or natural contamination.

The negative deviations are given in table 9 and the positive deviations in table 10.

Table 9: summary of the negative deviations

#	Product	Strain	Inoculation level (cfu / sample)	O&A	Palcam	Identification	Final result O&A	Final result Palcam	Agreement O&A	Agreement Palcam	Reference method on LESS broth of the alternative method	Category	Type

During the validation study, the selective agar plates were read at 2 incubation times (i.e. 24 h and 48 h). For information, the following evolutions were observed (Table 11).

Table 11: evolution of the aspect of the Petri dishes from 24 h to 48 h of incubation

#	O&A			Agreement		Category	Type
	24 h	48 h	Confirmatory tests	24 h	48 h		
5003	-	H-	*L. welshimeri*	ND	PA	3	a
3926	st	H-	*L. seeligeri*	NA	PD	4	a
4414	-	H-	*L. seeligeri*	NA	PD	4	a

The results are also given in the raw data, but the final result takes only into account the results observed after 24 h incubation time of the O&A agar media.

3.1.7. Calculation and interpretation of data

For each category and for all categories, the difference between ND and PD is calculated. The values obtained are compared to the acceptability limits defined by the ISO 16140-2:2016 standard.

Table 12 shows these results for the O&A agar media and for the Palcam agar media.

Table 12: acceptability limits

Cate-gory	Type		Values							
			O&A				Palcam			
			PD	ND	ND - PD	AL	PD	ND	ND - PD	AL
❶	a	Ready-to-eat	5	2	/	/	4	2	/	/
	b	Ready-to-reheat	3	3			3	3		
	c	Confectionaries, pastries and egg products	0	2			0	2		
	Total		**8**	**7**	**-1**	**3**	**7**	**7**	**0**	**3**
❷	a	Raw products (frozen or fresh)	3	1	/	/	3	1	/	/
	b	Meat based products ready to reheat	2	0			2	0		
	c	Raw and cooked delicatessen	4	0			3	0		
	Total		**9**	**1**	**-8**	**3**	**8**	**1**	**-7**	**3**
❸	a	Raw milk cheeses	4	3	/	/	4	3	/	/
	b	Other products based on raw milks	1	2			1	2		
	c	Heat treated dairy products	3	2			3	2		
	Total		**8**	**7**	**-1**	**3**	**8**	**7**	**-1**	**3**
❹	a	Raw products (fresh and frozen)	2	3	/	/	2	2	/	/
	b	Pre-cooked vegetables, vegetables under modified atmosphere	3	2			3	2		
	c	RTE	3	2			3	2		
	Total		**8**	**7**	**-1**	**3**	**8**	**6**	**-2**	**3**
❺	a	Raw products (fresh and frozen)	1	1	/	/	1	1	/	/
	b	Cured & smoked	0	0			1	0		
	c	Ready-to-eat, Ready to reheat	2	1			2	1		
	Total		**3**	**2**	**-1**	**3**	**4**	**2**	**-2**	**3**
❻	a	Process & cleaning waters	2	1	/	/	2	1	/	/
	b	Dusts and residus	1	2			1	2		
	c	Surface sampling	2	4			2	4		
	Total		**5**	**7**	**2**	**3**	**5**	**7**	**2**	**3**
Total			**41**	**31**	**-10**	**6**	**40**	**30**	**-10**	**6**

The observed values are below the acceptability limits for each category and for the combined categories, regardless the selective agar media tested.
The alternative method produces results comparable to the reference method.

3.1.8. Enrichment broth storage at 2 - 8°C for 72 h

A stability study of the enriched broths stored at 5±3°C for 72 hours was performed on all positive and discordant samples. After storage, the broths were reanalyzed and confirmed: 214 enrichment broths we re-tested.

The following changes are observed (cf. tables 13 and 14).

Table 13: results modifications after storage of the broth at 2-8°C for O&A

Sample number	O&A	
	Before LESS Plus Broth storage	After LESS Plus Broth storage
3549	ND	PA
3739	PD	NA
3795	PD	NA
3924	PA	ND
4414	ND	PA
4415	ND	PA

Table 14: results modifications after storage of the broth at 2-8°C for Palcam

Sample number	Palcam	
	Before LESS Plus Broth storage	After LESS Plus Broth storage
1116	PD	NA
3549	ND	PA
3795	PD	NA
3914	NA	PD
3919	PA	ND
3926	NA	PD
4421	ND	PA
4615	PA	ND
4851	NA	PD

Table 15 shows the differences between ND and PD and the acceptability limits after storage.

Table 15: acceptability limits after storage of the enriched broths

Cate-gory	Type		Values							
			O&A				Palcam			
			PD	ND	ND - PD	AL	PD	ND	ND - PD	AL
❶	a	Ready-to-eat	5	2	/	/	5	2	/	/
	b	Ready-to-reheat	3	3			3	3		
	c	Confectionaries, pastries and egg products	0	2			0	2		
	Total		**8**	**7**	**-1**	**3**	**8**	**7**	**-1**	**3**
❷	a	Raw products (frozen or fresh)	3	1	/	/	3	1	/	/

	c	RTE	3	2			3	2		
	Total		**8**	**6**	**-2**	**3**	**9**	**5**	**-4**	**3**
❺	a	Raw products (fresh and frozen)	1	1	/	/	1	1	/	/
	b	Cured & smoked	0	0			0	1		
	c	Ready-to-eat, Ready to reheat	2	1			2	1		
	Total		**3**	**2**	**-1**	**3**	**3**	**3**	**0**	**3**
❻	a	Process & cleaning waters	2	1	/	/	3	1	/	/
	b	Dusts and residus	1	2			1	2		
	c	Surface sampling	2	4			2	4		
	Total		**5**	**7**	**2**	**3**	**6**	**7**	**1**	**3**
Total			**39**	**29**	**-10**	**6**	**41**	**30**	**-11**	**6**

The observed values are below the acceptability limits for each category and for the combined categories, regardless the selective agar media tested.

The alternative method produces results comparable to the reference method.

3.1.9. Confirmation

A summary of the differences observed between streaking onto O&A agar and PALCAM plates is given in Table 16.

Table 16: Differences observed between streaking onto O&A agar and Palcam plates

Sample n°	O&A agar	Palcam	Strains isolated
1116	st	+	*L. monocytogenes*
3912	H- d	-	*L. grayi*
3914	H+ (2)	-	*L. monocytogenes*
4414	-	+d	*L. seeligeri*
4415	-	+	*L. innocua*
4421	H-	-	*L. innocua*
5890	st	+	*L. monocytogenes*

In 4 cases, typical colonies were observed only on Palcam plates and in 3 cases, they were observed only on O&A plates.

3.2. Relative level of detection study

3.2.1. Experimental design

Six matrix-strain pairs were analyzed by the reference method and by the alternative method (See Table 17).

Three levels of contamination were prepared consisting of a negative control level, a low level, and a higher level. Only one strain of the target analyte was used to contaminate the low and the high level.
The negative control level shall not produce positive results. Five replicates are tested for this level.
The low level shall be the theoretical detection level, it has been contaminated at 0.7 - 1 CFU per test portion to obtain fractional recovery results. Twenty replicates are tested for this level.
The higher level shall be just above the theoretical detection level, it has been contaminated at 2 - 3 CFU per test portion. Five replicates are tested for this level.

Food samples were contaminated using the seeding protocol. Bulk contaminations were performed on the matrix for the different levels of contamination, then the matrix was stored at 4°C for 48 hours before analysis.

An enumeration of the mesophilic aerobic flora was performed on the matrices, as well as a detection of *Listeria* using the ISO 11290-1/A1 standard method to check the absence of *Listeria* spp in the matrices.

Table 17: matrix-strain pairs used for the determination of the RLOD of the method

Matrix	Strain	Origin
❶ *Composite foods:* **Deli-salad (Piemontese salad)**	*Listeria seeligeri* Ad 1293	Parsley
❷ *Meat products:* **Rillettes**	*Listeria monocytogenes* Ad 669	Rillettes
❸ *Milk and Dairy products:* **Raw milk cheese (Brie)**	*Listeria innocua* Ad 636	Cheese
❹ *Vegetables:* **Ready-to-cook vegetables**	*Listeria monocytogenes* Ad 279	Ready-to-cook vegetables
❺ *Fish and seafood:* **Smoked salmon**	*Listeria welshimeri* Ad 1669	Fish
❻ *Environmental samples:* **Process water**	*Listeria monocytogenes* Ad 551	Environmental sample

3.2.2. Results and calculation of the RLODs

Raw results are shown in Appendix E. The RLOD is defined as the ratio of the LODs of the alternative method and the reference method: RLOD= LOD_{alt} / LOD_{ref}.

The RLODs calculations were performed according to the standard ISO 16140-2: 2016 using the Excel spreadsheet available for download at http://standards.iso.org/iso/16140. Values of the RLODs are presented in table 18.

Table 18: RLODs values (RLOD: the estimated relative level of detection value, RLODU: the upper limit of the 95% confidence interval for RLOD, RLODL: the lower limit of the 95% confidence interval for RLOD, b=ln(RLOD): logarithm of the RLOD value, sd(b): standard deviation of b, z-Test statistic: absolute value of the test statistic of the z-Test with the null hypothesis H0: b=0, p-value: p-value of the z-Test)

Name	RLOD	RLODL	RLODU	b=ln(RLOD)	sd(b)	z-Test statistic	p-value
❶	0.8	0.3	2.1	-0.3	0.5	0.5	1.4
❷	0.8	0.3	2.3	-0.2	0.5	0.3	1.3
❸	0.3	0.1	0.8	-1.3	0.5	2.5	2.0
❹	0.6	0.2	1.6	-0.4	0.5	0.9	1.7
❺	1.2	0.4	3.3	0.2	0.5	0.3	0.8
❻	0.8	0.3	1.9	-0.2	0.4	0.5	1.4
Combined	0.7	**0.5**	**1.0**	**-0.4**	**0.2**	**1.9**	**1.9**

The LOD_{50} calculations according to Wilrich & Wilrich POD-LOD calculation program - version 11, are given in Table 19.

Table 19: LOD50% for the alternative and reference method

Matrix	Strain	LOD50% (CFU/25g) Reference method	LOD50% (CFU/25g) Alternative method
Deli-salad	*Listeria seeligeri*	0.676	0.473
Rillettes	*Listeria monocytogenes*	0.460	0.385
Raw milk cheese	*Listeria innocua*	1.574	0.444
Ready-to-cook vegetables	*Listeria monocytogenes*	0.870	0.620
Smoked salmon	*Listeria welshimeri*	1.106	1.292
Process water	*Listeria monocytogenes*	0.874	0.694
Combined results		**0.894**	**0.611**

3.2.3. Interpretation and conclusion

The RLODs values are below the acceptability limit set at 2.5, meaning that, as stated in ISO 16140-2:2016, the maximum increase in LOD of the alternative versus the reference method is not considered as relevant in consideration of the fitness for purpose of the method.

In conclusion, alternative and reference methods show similar LODs values for the detection of *Listeria* spp in the categories tested.

3.3. Inclusivity and exclusivity study

3.3.1. Test protocols

20 *L. monocytogenes* strains, 30 *Listeria* spp strains and 30 non-target strains were tested by the alternative method and by the reference method.

- **Inclusivity**

Listeria strain cultures were performed in BHI medium at 37°C. Dilutions were done in order to inoculate 10 to 100 cells/225 ml of LESS Plus broth (the LESS Plus broth was incubated for 22 h at 30°C), prior streaking onto O&A and Palcam plates.

- **Exclusivity**

Negative strain cultures were performed in BHI at 37°C. Dilutions were realized in order to inoculate 10^5 cells/ml in buffered peptone water. The broths were incubated for 22 h at 37°C prior streaking onto O&A and Palcam plates.

3.3.2. Results

Raw data are given in Appendix F.

- **Inclusivity**

The 50 target strains gave typical colonies on the selective agar media, except the 2 *Listeria grayii* strains which did not grow on Palcam plates.

- **Exclusivity**

No typical colonies were observed on O&A and Palcam agar media among the 30 non-target tested strains.

3.3.3. Conclusion

The selectivity of the method is satisfactory.

3.4. Practicability

The alternative method practicability was evaluated according to the AFNOR criteria relative to method comparison study.

- **Storage conditions, shelf-life and modalities of utilization after first use**

Upon receipt, store at 2 - 30°C. Keep container tightly closed.
Expiry applies to medium in its intact container when stored directed.

- **Common step with the reference method**

No common step.

- **Time-to-result**

Steps	Reference method	Alternative method
Negative samples		
Sampling (Half Fraser or LESS Plus broth)	Day 0	Day 0
Fraser 1	Day 1	/
Half Fraser or LESS Plus broth streaking (O1 – P1)	Day 1	Day 1
Fraser 1 streaking (O2 – P2)	Day 3	/
Reading plates (O1 – P1)	Day 2 - Day 3	Day 2 – Day 3
Reading plates (O2 – P2)	Day 4 - Day 5	/
Presumptive positive or positive results		
Sub-culture of typical colonies on TSAYE	Day 2 - Day 5	Day 2 – Day 3
Confirmatory tests	Day 3 - Day 6	Day 3 – Day 4
Results	Day 4 - Day 7	Day 4 – Day 5

4. Interlaboratory study

4.1. Organization of the study

Samples were sent to 15 laboratories. Cheese sample (Camembert, fat content: 21%, salt: 1.4 %) was inoculated with a *Listeria monocytogenes* strain.

Samples were prepared and inoculated on Monday 14 December 2015, as described below:

- BLUE LABEL: 24 blind coded samples for the detection of *Listeria* spp by the reference method (EN ISO 11290-1/A1),
- RED LABEL: 24 blind coded samples for the detection of *Listeria* spp by the alternative method,
- 1 sample for aerobic mesophilic flora enumeration by ISO 4833-1 method,
- 1 water flask labelled "Temperature Control" with a temperature probe for temperature control during transport and storage in the laboratory until the beginning of the analyses.

The targeted inoculation levels were the following:

- Level: 0 CFU/25 g,
- Level 1: 2 CFU/25 g,
- Level 2: 8 CFU/25 g.

Blind coded samples were placed in isothermal boxes, which contained cooling blocks, and express-shipped to the different laboratories.
A temperature control flask containing a sensor was added to the package in order to register the temperature profile during the shipping, the package delivery and the storage until analyses.

Samples were shipped in 24 h to 48 h to the involved laboratories. The temperature conditions had to stay lower or equal to 8°C during shipping, and between 0°C – 8°C in the labs.
Collaborators and the Expert Laboratory carried out the analyses on Tuesday 15 December or Wednesday 16 December 2015 with the alternative and reference methods. The analyses by the reference method and the alternative method were performed on the same day.

The interlaboratory study instructions were sent on 24th November 2015.

4.2. Experimental parameters controls

4.2.1. Sample stability

4.2.1.1. Contamination levels before inoculation

The contamination rates and the estimated precisions are set out in the table below.

Table 20: target and real contamination levels (CFU/25 g)

Level	Samples	Theoretical target level	True level	Low limit	High limit
Level 0 L_0	4-7-9-10-13-18-23-24	0	/	/	/
Low level L_1	2-3-8-12-15-17-19-21	2	2.4	2.0	2.9
High level L_2	1-5-6-11-14-16-20-22	8	9.6	7.8	11.8

4.2.1.2. Strain stability during transport

In order to detect the presence of *Listeria spp*., the reference method was applied on five portions (25 g) before the inoculation. All the results were negative.
Three samples inoculated at a high level (100 CFU/g) were tested for enumeration after 24 h and 48 h storage. Three samples inoculated at a low level were tested for detection after 24 h and 48 h storage (See table 21).

Table 21: Listeria spp stability in the matrix

Day of analysis	***Listeria* spp. detection**		**Mesophilic aerobic**
	CFU/g	Detection/25 g	**flora (CFU/g)**
Day 0	140	+	$6.3x10^7$
	100	-	
	140	+	
Day 1	150	+	$1.0x10^8$
	90	+	
	170	-	
Day 2	170	+	$1.9x10^8$
	180	+	
	270	+	

No evolution was observed during the storage for 48 h at 2 - 8°C.

4.2.1.3. Logistic conditions

The temperatures measured at reception by the Labs, the temperatures registered by the thermo-probe, and the receipt dates are given in Table 22.

Table 22: samples temperature upon receipt (T°C: temperature in °C)

Laboratories	**Probe T°C**	**Receipt T°C**	**Receipt date and time**		**Analysis date**
A	3.0	3,3	15/12/2015	10h30	16/12/2015
B	2.0	4,0	15/12/2015	14h20	16/12/2015
C	2.5	4,2	15/12/2015	13h30	/
D	3.0	3,3	15/12/2015	10h05	15/12/2015
E	3.0	3,4	15/12/2015	09h40	15/12/2015
F	2.5	3,7	15/12/2015	11h30	16/12/2015
G	3.0	2,8	15/12/2015	16h30	15/12/2015
H	2.5	4,3	15/12/2015	13h30	/
I	3.0	6,0	15/12/2015	15h50	16/12/2015
J	*Not received*	7,8	15/12/2015	12h00	/
K	3.5	4,3	15/12/2015	10h00	16/12/2015
L	3.0	4,2	15/12/2015	14h30	/
M	2.5	3,5	15/12/2015	13h15	16/12/2015
N	2.5	3,8	16/12/2015	11h00	16/12/2015
O	3.0	6,2	15/12/2015	12h20	15/12/2015

All the samples were delivered in appropriate conditions. Temperatures during shipment and at receipt were all correct.

4.3. Results

The raw data are given in Appendix G.

4.3.1. Results obtained by the Expert Laboratory

The results obtained by the Expert Laboratory are the following (see table 23).

Table 23: Results obtained by the Expert Laboratory

Level	Reference method	Alternative method
L_0	0 / 8	0 / 8
L_1	7 / 8	8 / 8
L_2	8 / 8	8 / 8

4.3.2. Results obtained by the collaborators

- **Mesophilic aerobic flora**

The enumeration of the mesophilic aerobic flora varies from 6.5 10^6 to 4.6 10^8 CFU/g.

- **Reference method**

Table 24 presents the positive results of all collaborators.

Table 24: positive results of the collaborators (P: before confirmation; CP: after confirmation)

Lab	Reference method			Alternative method					
	L_0	L_1	L_2	L_0		L_1		L_2	
	P_0	P_1	P_2	P_0	CP_0	P_1	CP_1	P_2	CP_2

K	0	6	8	1	1	8	8	8	8
L	0	8	8	0	0	6	6	8	8
M	0	6	8	1	1	8	8	8	8
N	0	7	8	0	0	7	7	8	8
O	0	7	8	0	0	7	7	8	8
Total	**0**	**103**	**120**	**2**	**2**	**108**	**108**	**120**	**120**

According to the AFNOR technical rules, it is possible to include the results from a collaborator with maximum one cross contamination at Level 0. For this study, this rule was applied.
The results from the 15 collaborators were kept for interpretation.

4.4. Interpretation of the results

4.4.1. Summary of the results

Table 25 details per method, at level 1 for which fractional positive results are obtained, the results obtained during the study.

Table 25: tests results for the two methods at level L_1

Response	Reference method positive (R+)	Reference method negative (R-)
Alternative method positive (A+)	Positive agreement PA = 94	Positive deviation PD = 14
Alternative method negative (A-)	Negative deviation ND = 9 including 0 PPND	Negative agreement NA = 3 including 0 PPNA

For Level 1, the negative deviations are listed in Table 26 and the positive deviations in Table 27.

Table 26: negative deviations

Collaborator	Sample #
B	B15
C	C17
E	E15
F	F15
I	I19
	I21
L	L3
	L19
O	O19

Table 27: positive deviations

Collaborator	Sample #
A	A17
B	B8
E	E3
F	F21
H	H17
I	I15
J	J12
	J15
	J21
K	K19
	K21
M	M8
	M12
O	O21

The difference between (ND – PD) for the level where fractional recovery was obtained (L_1) is calculated.

The observed value found for (ND – PD) shall not be higher than the acceptability limit (AL). The AL is defined as $[(ND - PD)_{max}]$ and calculated per level where fractional recovery was obtained as described below using the following three parameters:

- $(p+)_{ref} = \frac{P_x}{N_x}$, where

P_x = number of samples with a positive result obtained with the reference method at level x, (L_1 or L_2) for all laboratories;

N_x = number of samples tested at level x (*L1* or *L2*) with the reference method by all laboratories.

- $(p+)_{alt} = \frac{CP_x}{N_x}$, where

CP_x = number of samples with a confirmed positive result obtained with the alternative method at level x (*L1* or *L2*) for all laboratories;
N_x = number of samples tested at level x (*L1* or *L2*) with the alternative method by all laboratories.

- $(ND - PD)_{max} = \sqrt{3N_x \times ((p+)_{ref} + (p+)_{alt} - 2((p+)_{ref} \times (p+)_{alt}))}$, where

N_x = the total number of samples tested for level x (L1 or L2) by all laboratories.

The AL is not met when the observed value is higher than the A*L*. When the AL is not met, investigations should be made (e.g. root cause analysis) in order to provide an explanation of the observed results.

Based on the AL and the additional information, it is decided whether the alternative method is regarded as not fit for purpose. The reasons for acceptance of the alternative method in case the AL is not met shall be stated in the study report.

In this study, fractional positive results are observed at level *L1* only. The different parameters obtained by the calculation are detailed in the table below:

Table 28: values obtained for the determination of the acceptability limit

Parameter	Value
N_x	120
$(p+)_{ref}$	0.86
$(p+)_{alt}$	0.90
Acceptability limit: AL = $(ND-PD)_{max}$	**8.71**
Observed value: ND-PD	**-5**

The value (ND-PD) is inferior to the acceptability limit, so the requirements of the standard ISO 16140-2:2016 are fulfilled.

4.4.2. Calculation of sensitivities, relative trueness and false positive ratio

Based on the data of tables24 and 25, the following parameters are calculated:

- Specificity for the alternative method: $SP_{alt} = \left[1 - \left(\frac{CP_0}{N_-}\right)\right] \times 100\%$

- Specificity for the reference method: $SP_{ref} = \left[1 - \left(\frac{P_0}{N_-}\right)\right] \times 100\%$

Where N- is the number of all L_0 tests.
P_0 and CP_0 are the total number of false-positive results obtained with the blank samples.

- Sensitivity for the alternative method: $SE_{alt} = \frac{(PA+PD)}{(PA+ND+PD)} \times 100\%$

- Sensitivity for the reference method: $SE_{ref} = \frac{(PA+ND)}{(PA+ND+PD)} \times 100\%$

- Relative trueness: $RT = \frac{(PA+NA)}{N} \times 100\%$

- False positive ratio for the alternative method: $FP = \frac{(FP)}{NA} \times 100\%$

where N is the total number of samples (NA + PA + PD + ND) and FP is false positive results.

The results are the following:

SP_{alt} = 98,3%
SP_{ref} = 100 %
SE_{alt} = 92,3%
SE_{ref} = 88,0%
RT = 80,8%
FP = 0%

4.5. Evaluation of the $LOD_{50\%}$, $LOD_{95\%}$ and RLOD

The RLOD, $LOD_{50\%}$ and $LOD_{95\%}$ are calculated using the Excel spreadsheet called RLOD_interlab-study_16140-2_AnnexF_ver1_28_28-06-2017 available at http://standards.iso.org/iso/16140.

The values for each method are presented in Table 29.

Table 29: values of LOD50% and LOD95% for reference and alternative method and value of RLOD for the alternative method (CFU/25 g)

Method	$LOD_{50\%}$	$LOD_{95\%}$	RLOD
Reference	0.80 [0.62 ; 1.02]	3.45 [2.69 ; 4.41]	0.96 [0.72 ; 1.29]
Alternative	0.77 [0.60 ; 0.99]	3.32 [2.59 ; 4.26]	

5. Conclusion

- **Methods comparison study**

The method comparison study scheme corresponds to an unpaired study design as the alternative and reference methods do have different enrichment procedures.

In the sensitivity study, 6 categories were tested: 5 food categories and the environmental samples. The alternative method shows 41 positive deviations (PD) when using O&A plates and 40 positive deviations when using Palcam plates. 31 negative deviations were obtained when using O&A plates and 30 negative deviations when using the Palcam plates. The (ND - PD) values are below the acceptability limits (AL) whatever the categories and as well for the 6 tested categories. The number of PD is higher that the number of ND.

The Relative Levels of Detection (RLOD) are all below the AL fixed at 2.5 for the unpaired data study whatever the matrix/strain pairs.

The inclusivity and exclusivity testing give the expected results for the 50 target strains and the 30 non-target strains.

It is possible to store the primary enrichment broth for 72 h at 2-8°C.

The negative results are available in two days and the positive results in four days.

The alternative method fulfils all the ISO 16140-2 and AFNOR technical rules requirements.

- **Interlaboratory study**

The data and interpretations comply with the ISO 16140-2:2016 requirements. The OBOP-L method is considered equivalent to the ISO standard.

The data and their interpretation produced in this report fulfill the requirements of both the EN ISO 16140-2:2016 standard and the version 7 of the *Requirements regarding comparison and interlaboratory studies for implementation of the standard EN ISO 16140-2*.

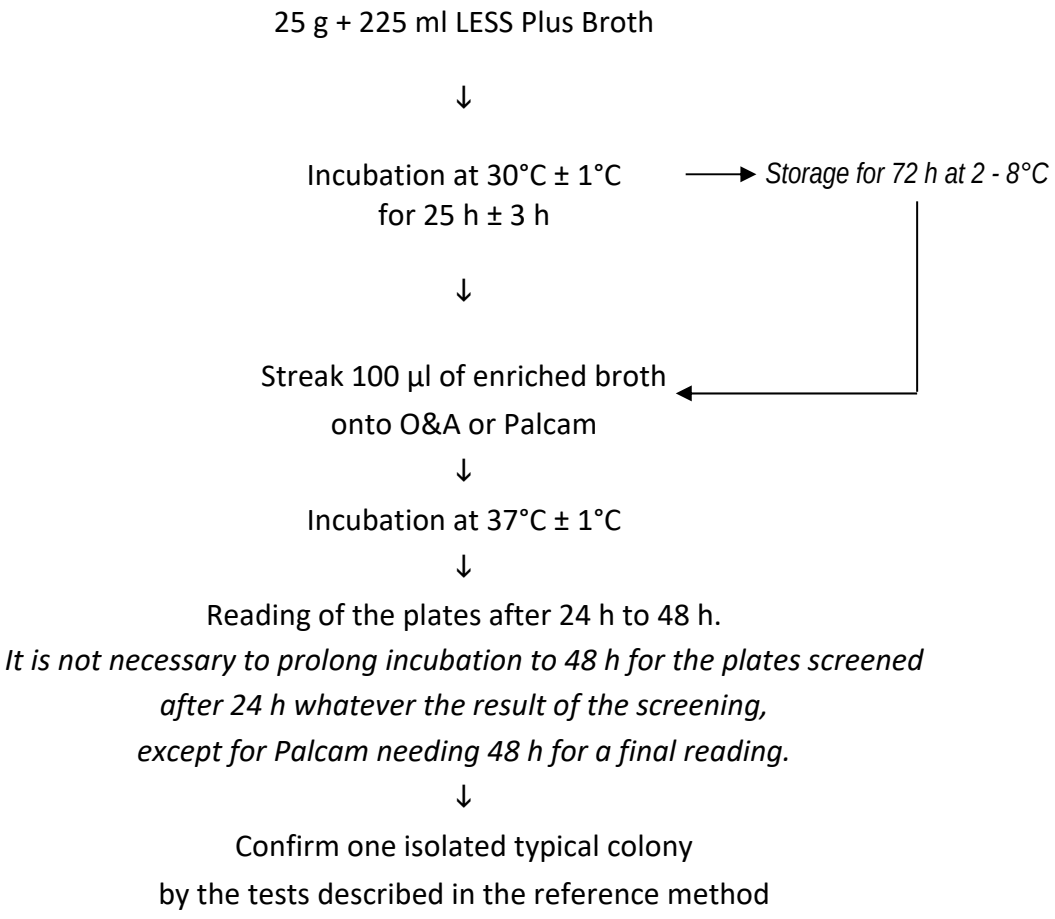
APPENDICES

Appendix A

Protocol of the alternative method



During the validation study, all the negative results were confirmed by proceeding to a subculture in Fraser broth for 48 h at 37°C ± 1°C prior to streaking onto O&A and Palcam plates in order to have a total duration of incubation of the reference method (Half Fraser 24 h ± 3 h + Fraser 48 h ± 3 h).

Appendix D

Sensitivity study: raw data

H-: characteristic *Listeria* colonies without halo
H+: characteristic *Listeria* colonies with halo
-: no typical colonies but presence of background microflora
st: plate without any colony
PA: positive agreement
NA: negative agreement
ND: negative deviation
PD: positive deviation
PPNA: positive presumptive negative agreement
PPND : positive presumptive negative deviation
NC: non characteristic colony on TSYEA
d: doubtful colony
